Notes for authors (continued from the inside front cover)

Abstract:
Papers must have an abstract of not more than 200 words of the significant results reported in the paper.

Keywords:
Between 3 and 6 keywords must be provided for indexing and information retrieval.

The Text:
The paper must be divided into sections starting preferably with 'Introduction' and ending with 'Conclusions'. The main sections should be numbered 1, 2, etc., the sub-sections 1.1, 1.2, etc., and further sub-sections (if necessary) 1.1a, 1.1b, etc.

All measurements should be given in SI units (see *Nature London* **216** 1272–1274, 1967). Arabic numerals should be used, for time, dimensions, distances and weights (e.g. 2h, 2·5 μ (mu), 3 cm, 5 g), otherwise numbers of less than three figures should be spelt out, except where numbers occur frequently in a sentence or paragraph or in a group. Avoid figures at the beginning of a sentence. Give dates in the form: 11 August 1975. The scientific names of genera and species are printed in italics and therefore should be underlined in the typescript. Papers relating to descriptions of taxa should be based on a reasonably good series of specimens and not on odd material. Authors of names of taxa should be cited in the summary and at the first mention of a taxon in the text, but not elsewhere. Accepted common names of plants and animals (and other organisms) and of plant and animal or other diseases should neither be capitalised nor placed within quotation marks. Words and phrases of foreign origin but not in common use (e.g., in vitro, in situ) are printed in roman type. The attention of authors proposing new taxa is drawn to the need to give a Latin diagnosis, adequate descriptions and figures, and to designate the types as required by the International Code of Nomenclature. The description of a new species should be accompanied by a figure and the type specimen wherever possible should be deposited in one of the National herbaria or other collections.

Tables:
All tables must be numbered consecutively in arabic numerals in the order of appearance in the text. The tables should be self-contained and have a descriptive title.

Figures:
All figures including photographs should be numbered consecutively in arabic numerals in the order of appearance in the text. Photographs should be assembled together suitably to form one or more plates. Do not include line drawings and photographs in the same plate. Photographs should be sharp, high contrast, glossy prints.

Originals of line drawings should be about twice the final size. For all figures, wherever necessary, scales should be drawn and the correct indication of the scale given (to avoid recalculation of magnifications). Write author(s), title and figure numbers on back of illustrations. Original illustrations cannot be sent to the referees. Authors should, therefore, submit, in addition to the original illustrations, *two* good copies of all illustrations. Xerox copies of photographs are unsatisfactory for refereeing purpose.

References:
References should be cited in the text by author and year, not by number. If there are more than two authors, reference should be given to the first author followed by *et al* in the text.
